

THERMOPLASTIC ADHESIVE DISPENSING METHOD AND APPARATUS

ABSTRACT OF THE DISCLOSURE

Hot melt thermoplastic adhesive is predeposited
5 on a carrier strip having front and back release
surfaces. The carrier strip is rolled into a coil
compressing the thermoplastic hot melt into disks
which may later be removed for use. The disks are
spaced so that the carrier strip may be deformed to
10 expose a single disk to a planar surface permitting
simplified dispensing of the disks.
